

THE MPC GUIDE TO LOCAL DOT CT 87 COMPLIANCE

The Master Plumbers Council is a non-profit organization, consisting of small and large licensed plumbing contractors, whose mission is to protect the public health and safety of New York City through the enactment and enforcement of safe and effective plumbing Codes.

IMPORTANT: Effective April 15, 2019, persons working on the Utility portion of your gas meter piping are required to have a special DOT (Federal) Operator Qualification to perform this work.

Only a NYC licensed master plumber or their employees who possess this qualification are permitted to do the work. Persons performing the work must possess an identification card like the one below. You may scan the card to ensure the person's qualifications are current. Any standard QR reader will work. The person presenting the card should work for the plumber you hired for the job. **CT 86 or CT 87 must appear as current** for the person's qualification to be valid. **The third item listed is not relevant to the qualification.**

Task Name	Expires	
CT86 – Interior Jurisdictional Piping Safety Inspections	07/23/21	✔ >
CT87 – Interior Jurisdictional Piping Construction and Maintenance Activities	07/23/21	✔ >
Interior Building Gas Piping Safety Inspections & Connections	07/23/68	✔ >

What is your responsibility?

You should only hire a firm that employs properly qualified persons. The person performing the work must work for the plumber you hired for the job.

What will happen if I do not hire properly qualified persons?

The Utilities will require the plumber to provide the qualification prior to gas installation or restoration. Your job may be prolonged, or gas may not be restored, without the qualification. Avoid that possibility by only hiring a plumbing firm that is properly qualified.

Our members receive the most up to date information about all gas work processes. For more information, or to view a list of our members who are qualified to do this work, please visit our website: www.nycmpc.org
